## Analysis of Curriculum content categories

| Curriculum content category | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-----------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Number                      | 24                  | 32%               | 53%                       | -21%                                 |
| Measurement                 | 5                   | 40%               | 55%                       | -15%                                 |
| Geometry                    | 4                   | 0%                | 44%                       | -44%                                 |
| Statistics                  | 8                   | 38%               | 52%                       | -14%                                 |

## Analysis of Process categories

| Process category                    | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-------------------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Fluency in facts and procedures     | 6                   | 33%               | 72%                       | -39%                                 |
| Fluency in conceptual understanding | 13                  | 54%               | 61%                       | -7%                                  |
| Problem solving                     | 3                   | 0%                | 33%                       | -33%                                 |
| Mathematical reasoning              | 19                  | 19%               | 44%                       | -25%                                 |

## Implications for teaching and learning

- Samuel Kenji's scores for *Progress Test in Maths* are below average compared to national age-related expectations.

- Reviewing the *Analysis of Curriculum content categories* will help to identify where there are specific strengths and weaknesses and to plan next steps.
- It is recommended that individual diagnostic assessments are administered as soon as possible to investigate more precisely where additional support is most needed and to decide on appropriate interventions.
- Samuel Kenji may need specific structured support to access the curriculum. This extra support should focus on the basics of number bonds, counting and counting on, number work and place value for integers through practical activities, before moving on to a broader range of concepts.
- Make sure that Samuel Kenji begins to develop both a written and an oral language for mathematics and is able to read and write numbers from 1 to 1000 in numerals and words.
- The required multiplication and division facts for the 3, 4 and 8 multiplication tables can be practised using a variety of practical activities involving sharing, or by using a hundred square to look for patterns. Ask Samuel Kenji to predict the next number in the sequence and explain the answer.
- Samuel Kenji needs to develop an understanding of 'equal to', 'more than', 'less than (fewer)', 'most', 'least', and the ability to order numerals according to size, together with an understanding of symbols such as '<', '=' and '>'.
- Samuel Kenji should continue to recognise fractions in the context of parts of a whole, numbers, measurements, a shape, and unit fractions as a division of a quantity. Samuel Kenji should practise adding and subtracting fractions with the same denominator through a variety of increasingly complex problems to improve fluency.
- Samuel Kenji by now should be confident in telling the time from an analogue clock and a 12-hour digital clock. By involving Samuel Kenji in practical tasks and recording time using both analogue and digital 12-hour clocks, this provides a practical situation to promote fluency and prepares Samuel Kenji for using digital 24-hour clocks.
- Check that language is not a barrier by using suitable but varied vocabulary; use practical apparatus and keep the interventions either one-to-one or in a very small group in order to build confidence. Make time every day to practise these skills through play to develop confidence. Provide suitable equipment for Samuel Kenji to manipulate and explore how numbers work. Time spent in consolidating basic skills will lay good foundations for future success. The equipment can include objects like counters, interlocking cubes, coins, counting sticks, bead strings, number lines, 100-squares, place-value cards, and structural apparatus like Dienes blocks. Once whole number concepts (including all the numbers bonds to 20) are secure, work can begin on simple fractions (halves, quarters and thirds) using diagrams of shapes divided into fractional parts. This should be complemented with work introducing Samuel Kenji to graphical representations of data and the geometric properties of simple 2D and 3D shapes.
- An interactive whiteboard can also be a powerful tool for manipulating images to help improve understanding in many different areas of mathematics.
