## Analysis of Curriculum content categories

| Curriculum content category | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-----------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Number                      | 24                  | 68%               | 53%                       | 15%                                  |
| Measurement                 | 5                   | 60%               | 55%                       | 5%                                   |
| Geometry                    | 4                   | 40%               | 44%                       | -4%                                  |
| Statistics                  | 8                   | 38%               | 52%                       | -14%                                 |

## Analysis of Process categories

| Process category                    | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-------------------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Fluency in facts and procedures     | 6                   | 83%               | 72%                       | 11%                                  |
| Fluency in conceptual understanding | 13                  | 54%               | 61%                       | -7%                                  |
| Problem solving                     | 3                   | 67%               | 33%                       | 34%                                  |
| Mathematical reasoning              | 19                  | 52%               | 44%                       | 8%                                   |

## Implications for teaching and learning

- Theodore Lannon's scores for *Progress Test in Maths* are in the average range compared to national age-related expectations.

- Reviewing the *Analysis of Curriculum content categories* will help to identify where there are specific strengths and weaknesses and to plan next steps.
- At this stage, Theodore Lannon is beginning to develop the ability to recognise, describe, draw, compare and sort different shapes and use the related vocabulary. Teaching should involve using a range of measures to describe and compare different quantities such as length, mass, capacity/volume, time and money.
- Theodore Lannon should read and spell mathematical vocabulary, at a level consistent with increasing word reading and spelling knowledge.
- Theodore Lannon is generally secure in performing the basic calculations expected for this age group. These include age-appropriate fluency with whole numbers to 1000 and the four operations, simple fractions, the interpreting of graphical and statistical representations and an increasing understanding of the geometry of simple 2D and 3D shapes.
- Make sure that Theodore Lannon begins to develop both a written and an oral language for mathematics and is able to read and write numbers from 1 to 100 in numerals and words. Counting, reading, writing and comparing numbers to at least 100 and solving a variety of related problems will develop fluency, and counting in twos, fives and tens from different multiples all help to develop their recognition of patterns in the number system. Counting on in threes provides some groundwork for the introduction of 'thirds' in fraction work.
- Theodore Lannon needs to develop an understanding of 'equal to', 'more than', 'less than (fewer)', 'most', 'least', and the ability to order numerals according to size, together with an understanding of symbols such as '<', '=' and '>'.
- Theodore Lannon should continue to recognise fractions in the context of parts of a whole, numbers, measurements, a shape, and unit fractions as a division of a quantity. Theodore Lannon could also practise adding and subtracting fractions with the same denominator through a variety of increasingly complex problems to improve fluency.
- Theodore Lannon by now should be confident in telling the time from an analogue clock and a 12-hour digital clock. By involving Theodore Lannon in practical tasks and recording time using both analogue and digital 12-hour clocks, this provides a practical situation to promote fluency and prepares Theodore Lannon for using digital 24-hour clocks. Roman numerals from I to XII could also be introduced.
- Challenge Theodore Lannon to find alternative ways of obtaining the right answer, even for simple calculations and to discuss these with a friend or adult to help develop the language of mathematics and the ability to articulate thought processes. Try questions such as: 'What must be added to 43 to make 50?' (or any two-digit number to make the next multiple of 10), which can be written in the form  $43 + ? = 50$ . Ask Theodore Lannon how to find out the answer and whether there is more than one way of doing it. For more challenge, ask Theodore Lannon to write a subtraction equation using this information. This will help to develop problem solving skills as well as developing the language of mathematics, both oral and written.
- An interactive whiteboard can also be a powerful tool for manipulating images to help improve understanding in many different areas of mathematics.

## Analysis by question

The table below shows each question in the test and the pupil's response (correct/incorrect) compared with the group and standardisation average.

| Question number | Curriculum category | Process category                    | Question content                                                                                                                          | Score (/x) | Group % correct | Standardisation % correct |
|-----------------|---------------------|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------|---------------------------|
| AU1             | Number              | Fluency in facts and procedures     | Some of the dates are missing. Fill them in for him.                                                                                      | 1 / 1      | 96              | 86                        |
| AU2             | Number              | Fluency in facts and procedures     | Jake's birthday is on the third Sunday in April. Select Jake's birthday.                                                                  | 1 / 1      | 22              | 39                        |
| AU3             | Number              | Fluency in conceptual understanding | Jake visits his Granny every Tuesday. How many visits will he make in April?                                                              | 0 / 1      | 30              | 42                        |
| AU4             | Number              | Fluency in conceptual understanding | Which day of the week is the fourteenth of April?                                                                                         | 0 / 1      | 61              | 63                        |
| AU5             | Number              | Problem solving                     | Jake leaves school at four o'clock. He arrives at his Granny's house one and a half hours later. Which clock shows when he arrives there? | 1 / 1      | 9               | 19                        |
| AU6             | Number              | Fluency in facts and procedures     | Fill in the missing number.                                                                                                               | 1 / 1      | 61              | 70                        |
| AU7             | Number              | Fluency in conceptual understanding | Now fill in the answer to this sum.                                                                                                       | 0 / 1      | 61              | 68                        |
| AU8             | Number              | Mathematical reasoning              | Look at the subtraction sum. Fill in the missing number.                                                                                  | 0 / 1      | 4               | 24                        |
| AU9             | Number              | Fluency in conceptual understanding | This is a multiplication sum. Fill in the missing number.                                                                                 | 0 / 1      | 30              | 55                        |
| AU10            | Number              | Mathematical reasoning              | This is a division sum. Fill in the missing number.                                                                                       | 0 / 1      | 13              | 32                        |
| AU11            | Statistics          | Fluency in facts and procedures     | How many children take size three shoes?                                                                                                  | 0 / 1      | 30              | 67                        |
| AU12            | Statistics          | Fluency in conceptual understanding | How many children take the smallest shoe size?                                                                                            | 0 / 1      | 39              | 65                        |
| AU13            | Statistics          | Mathematical reasoning              | How many more children take size four than size two?                                                                                      | 0 / 1      | 30              | 31                        |
| AU14            | Statistics          | Problem solving                     | How many children took part in the survey?                                                                                                | 0 / 1      | 17              | 37                        |
| AU15            | Statistics          | Mathematical reasoning              | Ruby takes size two shoes. Move her shoe to the correct column of the pictogram.                                                          | 1 / 1      | 61              | 72                        |
| AU16-17         | Geometry            | Fluency in facts and procedures     | Which necklace uses an octagon? Which necklace uses a circle?                                                                             | 1 / 1      | 65              | 79                        |
| AU18            | Geometry            | Fluency in facts and procedures     | How many circles can you count in the pattern?                                                                                            | 1 / 1      | 78              | 90                        |
| AU19            | Geometry            | Mathematical reasoning              | Drag the line of symmetry to the correct place on the pentagon.                                                                           | 0 / 1      | 0               | 17                        |
