Group report for teachers

School: Académica Británica Cuscatleca	
Group: 3RD ELISA PTM OCTOBER 25-26	No. of students: 24
Period of testing: 14/10/2025 – 16/10/2025	Form: B

What is *Progress Test in Maths*?

The *PTM* series consists of two Forms: the original form (Form A), and the new form (Form B). Form A consists of 12 tests: 10 tests covering the age range 5 to 15+ years (*Progress Test in Maths* 5 to 15), plus an additional test for pupils aged between 11 and 12 years, which can be used as a transition test on entry to secondary education (*Progress Test in Maths* 11T). Form B consists of 9 tests covering the age ranges 6 to 15+ years.

Why use *Progress Test in Maths*?

Progress Test in Maths (PTM) can be used for both formative and summative purposes to identify strengths and weaknesses in students' maths skills and knowledge, and to plan teaching and learning strategies, targeted support, and extension work for groups and individuals. Using *PTM* year-on-year provides accurate and reliable information on students' attainment and progress in key maths competencies.

In addition to helping the teacher track the progress of individual students, *PTM* allows the school to compile an essential database of maths attainment. If *Progress Test in Maths* is used from start of school on an annual basis, the resulting profile of student and group attainment can help support the school's aim of raising standards in maths.

The Standard Age Score (SAS) is a reliable measure for ensuring that monitoring is accurate and based on relevant test content, and that students are making good progress.

Relationship between scores

Description	Very Low		Below Average		Average			Above Average		Very High			
Stanine (ST)	1		2	3	4	5	6	7	8	9			
Standard Age Score (SAS)	70		80		90	100	110	120		130			
Percentile Rank (PR)	1	5	10	20	30	40	50	60	70	80	90	95	99

Example scores

Age at test is the chronological age of the student at the point of testing.

The **number of questions attempted** can be important: a student may have worked very slowly but accurately and not finished the test and this will impact on his or her results.

The **Standard Age Score (SAS)** is the most important piece of information derived from *PTM*. The SAS is based on the student's raw score which has been adjusted for age and placed on a scale that makes a comparison with the standardisation sample of students of the same age. The average score is 100. The SAS is key to benchmarking and tracking progress and is the fairest way to compare the performance of different students within a year group or across year groups.

The **Stanine (ST)** places the student's score on a scale of 1 (low) to 9 (high) and offers a broad overview of his or her performance.

The **Group Rank (GR)** shows how each student has performed in comparison to those in the defined group. The symbol = represents joint ranking with one or more other students.

Student name	Tutor group	Age at test (yrs:mths)	No. attempted (/50)	SAS	SAS (with 90% confidence bands)										Overall ST	PR	GR (/30)	End of KS2 indicator	Progress Category
					60	70	80	90	100	110	120	130	140						
James Campbell	JF	9:06	50	105											5	62	13	106	Expected
Helen Brown	JF	9:04	50	115											7	82	6	109	Expected

Performance on a test like *PTM* can be influenced by a number of factors and the **confidence band** is an indication of the range within which a student's scores lies. The narrower the band the more reliable the score. This means that 90% confidence bands are a very high level estimate. The dot represents the student's SAS and the horizontal line represents the confidence band. The yellow shaded area shows the average score range.

The **Percentile Rank (PR)** relates to the SAS and indicates the percentage of students obtaining any particular score. PR of 50 is average. PR of 5 means that the student's score is within the lowest 5% of the standardisation sample; PR of 95 means that the student's score is within the highest 5% of the standardisation sample.

The **end of KS2 indicators** show where future scaled scores and attainment may lie when the student takes the national tests for **Maths**.

Progress between administrations of *PTM* has been measured and is expressed as much higher than expected, higher than expected, expected, lower than expected and much lower than expected.

Analysis of group scores (all students)

The table and bar chart below show the distribution of scores for the group against the standardisation average.

Description	Very low	Below average		Average			Above average		Very high
SAS bands	<74	74–81	82–88	89–96	97–103	104–111	112–118	119–126	>126
Standardisation average	4%	7%	12%	17%	20%	17%	12%	7%	4%
All students	8%	17%	25%	25%	8%	8%	0%	8%	0%

The table below shows the mean scores with confidence bands for the group against the standardisation average.

	No. of students	Mean SAS	SAS (with 90% confidence bands)											
			60	70	80	90	100	110	120	130	140			
Standardisation average	-	100.0												
All students	24	90.6												

School: Academica Británica Cuscatleca	
Group: 3RD ELISA PTM OCTOBER 25-26	No. of students: 24
Period of testing: 14/10/2025 – 16/10/2025	Form: B

Analysis of group scores (by gender)

The table and bar chart below show the distribution of scores for the group, males and females, against the standardisation average.

Description	Very low	Below average		Average			Above average		Very high
SAS bands	<74	74–81	82–88	89–96	97–103	104–111	112–118	119–126	>126
Standardisation average	4%	7%	12%	17%	20%	17%	12%	7%	4%
All students	8%	17%	25%	25%	8%	8%	0%	8%	0%
Males	9%	9%	27%	18%	18%	9%	0%	9%	0%
Females	8%	23%	23%	31%	0%	8%	0%	8%	0%

The mean standard age score for males is not significantly different from that of the females.

The table below shows the mean scores with confidence bands for the group, males and females, against the standardisation average.

	No. of students	Mean SAS	SAS (with 90% confidence bands)											
			60	70	80	90	100	110	120	130	140			
Standardisation average	-	100.0												
All students	24	90.6												
Males	11	92.8												
Females	13	88.7

Period of testing: 14/10/2025 – 16/10/2025	Form: B

Analysis of group scores (by question)

The chart below shows each question and the percentage correct for the group compared with the standardisation average.

School: Academica Británica Cuscatleca	
Group: 3RD ELISA PTM OCTOBER 25-26	No. of students: 24
Period of testing: 14/10/2025 – 16/10/2025	Form: B

The table below shows each question and the percentage correct for the group compared with the standardisation average (by standardisation % correct).

Question number	Curriculum category	Process category	Question content	Group % correct	Standardisation % correct	Group / standardisation difference
MM3	Number	Mathematical reasoning	What is half of ten?	88	93	-5
AU3	Number	Fluency in facts and procedures	Count the number of bricks in each pile. Circle the 2 piles that have 11 bricks in total.	88	84	4
AU4	Number	Fluency in facts and procedures	Circle the 3 piles that have 15 bricks in total.	88	80	8
AU21	Statistics	Fluency in conceptual understanding	Which author is the most popular in Zain's school?	71	80	-9
MM2	Number	Fluency in facts and procedures	What is one less than thirty?	67	75	-8
MM1	Geometry	Fluency in facts and procedures	How many corners does a rectangle have?	58	71	-13
MM11	Measures	Fluency in facts and procedures	I have a fifty pence coin, a twenty pence coin, a five pence coin and two one pence coins. How much do I have altogether?	67	71	-4
MM4	Number	Mathematical reasoning	Write a multiple of five that is less than twenty-five.	67	65	2
AU1a	Number	Fluency in facts and procedures	Using the three numbers below, fill in the blank spaces of three sums to make totals of 100.	38	65	-27
AU19i	Number	Fluency in facts and procedures	Levi has some calculations to do for his homework.	79	64	15
MM5	Number	Fluency in conceptual understanding	Write in figures the number three hundred and seventy-two.	54	63	-9
MM6	Number	Fluency in conceptual understanding	A cake is divided into four. How many pieces are there?	58	62	-4
MM9	Measures	Mathematical reasoning	How many five pence coins make twenty pence?	33	62	-29
AU1b	Number	Fluency in facts and procedures	What is the missing number?	54	62	-8
MM14	Number	Fluency in conceptual understanding	Look at the numbers in your booklet. Write down every odd number.	42	61	-19
AU19iii	Number	Fluency in facts and procedures	Levi has some calculations to do for his homework.	54	58	-4
AU14	Number	Fluency in conceptual understanding	Here is a number spider for 24. The calculations at the end of each 'leg' should make 24. Some are wrong.	53	54	-1
AU17	Measures	Problem solving	One orange weighs 60 grams. One grape weighs 5 grams. How many grapes weigh the same as 1 orange?	46	54	-8
AU2d	Number	Mathematical reasoning	Lauren's house number can be divided by 3. Circle Lauren's house number.	38	51	-13
AU15	Measures	Mathematical reasoning	Rachel is 90 centimetres tall. Her teacher is twice as tall as she is. How tall is Rachel's teacher?	25	51	-26
AU22a	Statistics	Mathematical reasoning	How many pupils chose Jeff Kinney as their favourite?	33	51	-18

Question number	Curriculum category	Process category	Question content	Group % correct	Standardisation % correct	Group / standardisation difference
AU16	Measures	Problem solving	One carrot weighs 50 grams. It weighs the same as 10 raspberries. How much does 1 raspberry weigh?	29	49	-20
AU12a	Number	Fluency in conceptual understanding	Fill in the table to show how many squares make up each L-shape.	50	47	3
AU7b	Measures	Mathematical reasoning	Arjun has £6.97. He buys some sweets that cost £3.42. How much money does he have left?	33	46	-13
MM10	Geometry	Fluency in facts and procedures	How many sides does a pentagon have?	13	43	-30
AU2a-c	Number	Fluency in conceptual understanding	Lauren's house number is bigger than 25, less than 47 and an odd number.	38	43	-5
AU5	Number	Fluency in facts and procedures	Here are some more bricks. They are put into 6 equal piles. How many bricks are there in each pile?	25	42	-17
AU10	Number	Mathematical reasoning	Now make the addition calculation with the smallest possible answer.	46	42	4
AU12b	Number	Mathematical reasoning	How many squares do you need to make L-shape 4?	42	39	3
AU13	Statistics	Fluency in conceptual understanding	How many children have each number of pencils in total?	13	39	-26
AU6d	Number	Fluency in conceptual understanding	Which 2 fractions are the same size?	13	38	-25
MM8	Number	Fluency in facts and procedures	What is three multiplied by seven?	25	37	-12
MM13	Number	Fluency in conceptual understanding	Eleven children are each given seven sweets. How many sweets are there altogether?	21	36	-15
AU8	Geometry	Fluency in facts and procedures	Draw lines to join the shapes to their names.	29	36	-7
MM15	Measures	Mathematical reasoning	How many days are there in five weeks?	8	34	-26
AU18	Measures	Fluency in conceptual understanding	The top pencil is 5 centimetres long. How long are the other pencils?	33	32	1
AU19ii	Number	Fluency in conceptual understanding	Levi has some calculations to do for his homework.	25	32	-7
AU22b	Statistics	Mathematical reasoning	How many pupils took part in the survey?	13	31	-18
MM7	Number	Mathematical reasoning	Look at the numbers in your booklet. Write the next two numbers.	33	30	3
AU9	Number	Mathematical reasoning	Make the addition calculation with the largest possible answer.	29	29	0
AU11	Number	Problem solving	Now make the subtraction calculation with the largest possible answer.	8	29	-21
AU20	Number	Problem solving	Nine children share a bag of sweets. Each child has 5 sweets and there are 3 sweets left. How many sweets were in the bag?	29	29	0
AU19iv	Number	Mathematical reasoning	Levi has some calculations to do for his homework.	25	28	-3
AU6a-c	Number	Fluency in conceptual understanding	Select the shape that is $\frac{2}{8}$ shaded. Select the shape that is $\frac{1}{2}$ shaded. Select the shape that is $\frac{1}{4}$ shaded	8	27	-19
AU7a	Measures	Fluency in conceptual understanding	How much money does she have?	8	25	-17
MM12	Number	Fluency in facts and procedures	Add the numbers twenty-six, eleven and thirty-four.	21	20	1

School: Academica Británica Cuscatleca

Period of testing: 14/10/2025 – 16/10/2025	Form: B

The table below shows each question and the percentage correct for the group compared with the standardisation average (by group / standardisation difference).

Question number	Curriculum category	Process category	Question content	Group % correct	Standardisation % correct	Group / standardisation difference
AU19i	Number	Fluency in facts and procedures	Levi has some calculations to do for his homework.	79	64	15
AU4	Number	Fluency in facts and procedures	Circle the 3 piles that have 15 bricks in total.	88	80	8
AU3	Number	Fluency in facts and procedures	Count the number of bricks in each pile. Circle the 2 piles that have 11 bricks in total.	88	84	4
AU10	Number	Mathematical reasoning	Now make the addition calculation with the smallest possible answer.	46	42	4
MM7	Number	Mathematical reasoning	Look at the numbers in your booklet. Write the next two numbers.	33	30	3
AU12a	Number	Fluency in conceptual understanding	Fill in the table to show how many squares make up each L-shape.	50	47	3
AU12b	Number	Mathematical reasoning	How many squares do you need to make L-shape 4?	42	39	3
MM4	Number	Mathematical reasoning	Write a multiple of five that is less than twenty-five.	67	65	2
MM12	Number	Fluency in facts and procedures	Add the numbers twenty-six, eleven and thirty-four.	21	20	1
AU18	Measures	Fluency in conceptual understanding	The top pencil is 5 centimetres long. How long are the other pencils?	33	32	1
AU9	Number	Mathematical reasoning	Make the addition calculation with the largest possible answer.	29	29	0
AU20	Number	Problem solving	Nine children share a bag of sweets. Each child has 5 sweets and there are 3 sweets left. How many sweets were in the bag?	29	29	0
AU14	Number	Fluency in conceptual understanding	Here is a number spider for 24. The calculations at the end of each 'leg' should make 24. Some are wrong.	53	54	-1
AU19iv	Number	Mathematical reasoning	Levi has some calculations to do for his homework.	25	28	-3
MM6	Number	Fluency in conceptual understanding	A cake is divided into four. How many pieces are there?	58	62	-4
MM11	Measures	Fluency in facts and procedures	I have a fifty pence coin, a twenty pence coin, a five pence coin and two one pence coins. How much do I have altogether?	67	71	-4
AU19iii	Number	Fluency in facts and procedures	Levi has some calculations to do for his homework.	54	58	-4
MM3	Number	Mathematical reasoning	What is half of ten?	88	93	-5
AU2a-c	Number	Fluency in conceptual understanding	Lauren's house number is bigger than 25, less than 47 and an odd number.	38	43	-5
AU8	Geometry	Fluency in facts and procedures	Draw lines to join the shapes to their names.	29	36	-7
AU19ii	Number	Fluency in conceptual understanding	Levi has some calculations to do for his homework.	25	32	-7

Question number	Curriculum category	Process category	Question content	Group % correct	Standardisation % correct	Group / standardisation difference
MM2	Number	Fluency in facts and procedures	What is one less than thirty?	67	75	-8
AU1b	Number	Fluency in facts and procedures	What is the missing number?	54	62	-8
AU17	Measures	Problem solving	One orange weighs 60 grams. One grape weighs 5 grams. How many grapes weigh the same as 1 orange?	46	54	-8
MM5	Number	Fluency in conceptual understanding	Write in figures the number three hundred and seventy-two.	54	63	-9
AU21	Statistics	Fluency in conceptual understanding	Which author is the most popular in Zain's school?	71	80	-9
MM8	Number	Fluency in facts and procedures	What is three multiplied by seven?	25	37	-12
MM1	Geometry	Fluency in facts and procedures	How many corners does a rectangle have?	58	71	-13
AU2d	Number	Mathematical reasoning	Lauren's house number can be divided by 3. Circle Lauren's house number.	38	51	-13
AU7b	Measures	Mathematical reasoning	Arjun has £6.97. He buys some sweets that cost £3.42. How much money does he have left?	33	46	-13
MM13	Number	Fluency in conceptual understanding	Eleven children are each given seven sweets. How many sweets are there altogether?	21	36	-15
AU5	Number	Fluency in facts and procedures	Here are some more bricks. They are put into 6 equal piles. How many bricks are there in each pile?	25	42	-17
AU7a	Measures	Fluency in conceptual understanding	How much money does she have?	8	25	-17
AU22a	Statistics	Mathematical reasoning	How many pupils chose Jeff Kinney as their favourite?	33	51	-18
AU22b	Statistics	Mathematical reasoning	How many pupils took part in the survey?	13	31	-18
MM14	Number	Fluency in conceptual understanding	Look at the numbers in your booklet. Write down every odd number.	42	61	-19
AU6a-c	Number	Fluency in conceptual understanding	Select the shape that is $\frac{2}{8}$ shaded. Select the shape that is $\frac{1}{2}$ shaded. Select the shape that is $\frac{1}{4}$ shaded	8	27	-19
AU16	Measures	Problem solving	One carrot weighs 50 grams. It weighs the same as 10 raspberries. How much does 1 raspberry weigh?	29	49	-20
AU11	Number	Problem solving	Now make the subtraction calculation with the largest possible answer.	8	29	-21
AU6d	Number	Fluency in conceptual understanding	Which 2 fractions are the same size?	13	38	-25
MM15	Measures	Mathematical reasoning	How many days are there in five weeks?	8	34	-26
AU13	Statistics	Fluency in conceptual understanding	How many children have each number of pencils in total?	13	39	-26
AU15	Measures	Mathematical reasoning	Rachel is 90 centimetres tall. Her teacher is twice as tall as she is. How tall is Rachel's teacher?	25	51	-26
AU1a	Number	Fluency in facts and procedures	Using the three numbers below, fill in the blank spaces of three sums to make totals of 100.	38	65	-27
MM9	Measures	Mathematical reasoning	How many five pence coins make twenty pence?	33	62	-29
MM10	Geometry	Fluency in facts and procedures	How many sides does a pentagon have?	13	43	-30

Student profiles

To understand how different pupils have performed on *PTM*, it may be helpful to group together those with a different profile of scores. Although it is important to focus on overall performance, it is possible to differentiate between pupils whose performance is 'Low' (Stanines 1, 2 & 3), 'Medium' (Stanines 4, 5 & 6) and 'High' (Stanines 7, 8 & 9).

Whilst it may be helpful to consider which pupils fall into which category, this information must be treated with caution as this is based on a single snapshot in time. It should be remembered that children may perform differently on another occasion when being observed by a teacher, and that progression across the different mathematical disciplines will not necessarily be even.

Low performance

- These pupils are performing below national age-related expectations as a group, and their scores vary from very low to below average. It is recommended that individual diagnostic assessments are administered as soon as possible to investigate more precisely where additional support is most needed and to decide on appropriate interventions.
- Pupils with a low score will need specific structured support to access the curriculum. These pupils will need to revisit concrete operational methods in order to establish and consolidate an understanding of number (cardinality and ordinality) before moving on to higher order concepts. Secure knowledge of number bonds to 20 is an essential skill for many future mathematical concepts, and if not secure should be addressed as a matter of urgency.
- Concrete objects and measuring tools should be used in practical activities. Teaching should also involve using a range of measures to describe and compare different quantities such as length, mass, capacity/volume, time and money. An ability to estimate and perform 'real life' calculations requires practice and repetition as well as a basic understanding of the decimal system.
- Getting pupils to discuss in pairs or groups how they have arrived at their answers will, not only help to consolidate their understanding, but also help them to develop their language of mathematics. They will be required to reason, explain, and justify, which are critical skills in developing mathematical acuity. They will also be challenged to see that there are sometimes multiple approaches to arriving at the right answer. This will help development in both the written and mental contexts.
- Pupils should be encouraged to play mathematical games, perform exercises in imagining to develop an understanding of number or shape and space, build confidence through practical applications to real life situations, and practice routine calculations to consolidate their knowledge of multiplication tables. An emphasis on practice will always aid fluency and build confidence.

Students:

Paolo Javier Aguilar Medrano	Mia Sage Bances-Crescente	José Adrián Boglione Jiménez
Adriana Contreras Patiño	Antonina Jacir Cuesta	Ariadna Carolina López Alvarado
Elena Molina Cañas	Xavier André Monterrosa Gordillo	Leslie Gabriela Ramírez León
Santiago Josué Ramírez Rivera	Maia Fernanda Sorto Villatoro	Waldo Antonio Zometa Pineda

Medium performance

- These pupils, as a group, demonstrate a performance that is broadly average and in line with national age-related expectations across the curriculum for mathematics. It is recommended that individual diagnostic assessments are made to investigate more precisely where strengths and weaknesses in different aspects of mathematics lie, and therefore where additional support or greater challenge is most needed.
- Pupils should be encouraged to discuss different approaches to arriving at the correct answer and to seek generalisations or counter examples depending on the context. Reasoning and conversation lie at the heart of developing problem solving skills; they afford the opportunity to conjecture, hypothesise and test whilst promoting perseverance and resilience. For example:
 - My shape has 3 vertices and 2 edges of the same length...what could my shape be? Can you make up a similar problem for a friend?
 - A child has a set of cubes. One cube has 1cm edges, the next 2cm edges, the next 3cm edges and so on up to the last cube which has 10cm edges. Can he build two towers which are exactly the same height if he has to use all of the cubes? If 'YES' then show how to do it; if 'NO' explain why not. What about if you add another cube with 11cm edges? Show how many different solutions there are.
- Pupils will need to build up the language of mathematics in written, oral and mental forms. An understanding of place value must translate into being able to perform calculations accurately and to write them out in an appropriate form. Developing the written ability to use symbols such as the '=' sign correctly is an important fundamental for success, as is developing confidence in their mental maths ability and their ability to speak about their calculations and what they are doing.
- Provide practice time and frequent opportunities for these pupils to use one or more facts that they already know to work out more facts, and engage them in discussion (perhaps by also providing discussion using common misconceptions). Give opportunities for them to explain their methods and strategies to you and their peers, which will help them to make connections, and develop both their problem solving abilities and their language of mathematics, thus improving both mental agility and written fluency.

Medium performance

Students:

Paulina Antonieta Alfaro Chacón

Gael Choi

Santiago José Cuestas Delgado

David Davidovich Pérez

María Fernanda Mena Rivas

Miranda Sofía Orantes Canjura

Matías Nicolás Pineda Olivo

Gianluca Pitta Bonet

Jorge Francisco Ramos Melchor

Ana Lucía Valiente Cisneros

High performance

- These pupils are performing above or significantly above national related expectation for their age group and, as a group, their scores vary from above average to very high. Fluency and agility are better developed for this group than others and they are likely to be more confident in their manipulation of numbers, measures and shapes. They can make connections between measure and number and are developing a secure understanding of fractions.
- Pupils with a high score will want and need to go beyond the answer to a particular problem to raise questions which the answer itself raises. They should be encouraged to discuss different approaches to arriving at the correct answer and to seek generalisations or counter examples depending on the context. Reasoning and conversation lie at the heart of developing problem solving skills; they afford the opportunity to conjecture, hypothesise and test whilst promoting perseverance and resilience.
- Next steps should include opportunities to stretch and develop conceptual understanding; to increase mental agility and to progress the development of formal written mathematics. This can be done by asking pupils to explain methodology and justify answers and procedures. Give them the opportunity to change questions (for example by saying 'What if.....' and then altering some aspect of the set question), to ensure that they develop problem solving skills of reasoning and generalising.
- Provide practice time and frequent opportunities for these pupils to use one or more facts that they already know to work out more facts, and engage them in discussion (perhaps by also providing discussion using common misconceptions). Give opportunities for them to explain their methods and strategies to you and their peers, which will help them to make connections, and develop both their problem solving abilities and their language of mathematics, thus improving both mental agility and written fluency.
- Offering opportunities to be the teacher to a group of other pupils is a good way to help them develop their own understanding.

Students:

Jimena Amaya Sibrián

Joseph Damien Franolich

School: Academica Británica Cuscatleca	
Group: 3RD ELISA PTM OCTOBER 25-26	No. of students: 23
Date(s) of first test: 15/11/2024 – 21/11/2024	Level: 7B
Date(s) of second test: 14/10/2025 – 16/10/2025	Level: 8B

Progress profiles

The SAS for the first and second administrations of the test are shown in the diagram. Students who are considered to be making expected progress are in the white band. Students making lower and much lower than expected progress are in the light and the dark orange band and those making higher and much higher than expected progress are in the light and the dark green band respectively.

Note that only those students who have completed two valid administrations of PTM are able to have performance compared and therefore progress reported in this section.

- Much higher than expected progress
- Higher than expected progress
- Expected progress
- Lower than expected progress
- Much lower than expected progress
- Males
- Females

Progress scores for the group (by last name)

The table below shows the SAS for the first and second administrations of the test and the resulting SAS difference and progress category. Note that only those students who have completed two valid administrations of PTM are able to have performance compared and therefore progress reported in this section.

Student name	First administration SAS	Second administration SAS	SAS difference	Progress category
Paolo Javier Aguilar Medrano	81	85	4	Expected
Paulina Antonieta Alfaro Chacón	86	109	23	Much higher
Jimena Amaya Sibrián	121	124	3	Higher
Mia Sage Bances-Crescente	75	74	-1	Lower
José Adrián Boglione Jiménez	69	81	12	Expected
Adriana Contreras Patiño	82	72	-10	Much lower
Santiago José Cuestas Delgado	85	96	11	Expected
David Davidovich Pérez	95	109	14	Much higher
Joseph Damien Franolich	128	126	-2	Higher
Antonina Jacir Cuesta	79	87	8	Expected
Ariadna Carolina López Alvarado	69	74	5	Expected
María Fernanda Mena Rivas	83	93	10	Expected
Elena Molina Cañas	81	86	5	Expected
Xavier André Monterrosa Gordillo	69	70	1	Lower
Miranda Sofía Orantes Canjura	95	90	-5	Lower
Matías Nicolás Pineda Olivo	90	98	8	Expected
Gianluca Pitta Bonet	76	97	21	Much higher
Jorge Francisco Ramos Melchor	95	89	-6	Lower
Leslie Gabriela Ramírez León	80	85	5	Expected
Santiago Josué Ramírez Rivera	69	85	16	Expected
Maia Fernanda Sorto Villatoro	69	74	5	Expected
Ana Lucía Valiente Cisneros	111	94	-17	Much lower
Waldo Antonio Zometa Pineda	81	85	4	Expected
