## Analysis of Curriculum content categories

| Curriculum content category | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-----------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Number                      | 38                  | 71%               | 62%                       | 9%                                   |
| Measurement                 | 6                   | 63%               | 47%                       | 16%                                  |
| Geometry                    | 4                   | 67%               | 40%                       | 27%                                  |
| Statistics                  | 6                   | 67%               | 63%                       | 4%                                   |

## Analysis of Process categories

| Process category                    | Number of questions | Student % correct | Standardisation % correct | Student / standardisation difference |
|-------------------------------------|---------------------|-------------------|---------------------------|--------------------------------------|
| Fluency in facts and procedures     | 13                  | 69%               | 64%                       | 5%                                   |
| Fluency in conceptual understanding | 22                  | 79%               | 64%                       | 15%                                  |
| Problem solving                     | 7                   | 44%               | 34%                       | 10%                                  |
| Mathematical reasoning              | 12                  | 67%               | 57%                       | 10%                                  |

## Implications for teaching and learning

- By comparing scores from a previous administration of *PTM* it is possible to categorise progress as expected, higher or lower than expected or much higher or much lower than expected.
  - Santiago Nicolás took *PTM8B* in November 2024 and from then until now has made higher than expected progress in maths.
- Reviewing the *Analysis of Curriculum content categories* will help to identify where there are specific strengths and weaknesses and to plan next steps.
- Where scores are fairly evenly balanced across the curriculum categories, this suggests that Santiago Nicolás will generally demonstrate a level of understanding of mathematical concepts appropriate for this age, irrespective of whether this is in written format requiring steps in a calculation to be written down, or in mental maths when only 'jottings' or nothing is written. Santiago Nicolás is developing the language of mathematics in line with expectations for his age group. Fluency and agility are better developed in applying and understanding maths than in mental maths.
- Where performance across the curriculum categories is uneven, specific areas of weakness might be addressed as follows:
  - Further targeted practice in the areas identified as being relatively weaker.
  - Practical activities using equipment that is designed to help Santiago Nicolás to 'see' the thinking that lies behind any concepts that are not yet secure.
  - Get Santiago Nicolás to explain workings to another pupil so that any misconceptions can be highlighted and corrected through discussion.
- Santiago Nicolás is generally secure in performing the basic mental calculations expected for this age group. These include age-appropriate fluency with whole numbers, fractions, decimals, percentages and ratio as well as an understanding of the number system, place value and the connections between inverse operations such as multiplication and division.
- Santiago Nicolás is developing mathematical reasoning and the ability to solve a wider range of problems, including increasingly complex properties of numbers and arithmetic, and problems demanding efficient written and mental methods of calculation. Santiago Nicolás has been introduced to the language of algebra to extend problem solving to a wider variety of contexts and they are also developing an understanding of the geometry of increasingly complex shapes and the language needed to describe these.
- Next steps should include opportunities to stretch and develop conceptual understanding, to increase mental agility and to progress the development of formal written mathematics using age-appropriate symbols and methodologies. This can be done by emphasising the higher order skills of hypothesising or predicting (What is an approximate value for  $49 \times 11$ ?); designing and comparing procedures (How many different ways can we work out  $53 - 18$ ? Which is the most efficient?); interpreting results (If  $9 \times 5 = 45$ , how many other calculations can we easily work out, e.g.  $0.9 \times 5$ ?) and applying reasoning (If I have 39p in my purse, what coins might they be?).
- By providing practice time and frequent opportunities for Santiago Nicolás to use one or more known facts to work out more facts, and by engaging Santiago Nicolás in discussion and providing opportunities to explain methods and strategies to you and his peers, Santiago Nicolás will be helped to make the connections between mental calculations and the written explanations and this will help to develop both problem solving abilities and the language of mathematics, thus improving both mental agility and the ability to plan and carry out accurate calculations in a more formal way.
- Developing the written ability to use symbols such as the '=' sign correctly is also an important fundamental for success in applying and understanding maths. If algebra has been introduced it is important that Santiago Nicolás understands the difference between an 'equation' and an 'expression' and the differences in use of the '=' in each case.

## Analysis by question

The table below shows each question in the test and the pupil's response (correct/incorrect) compared with the group and standardisation average.

| Question number | Curriculum category | Process category                    | Question content                                                                                           | Score (/x) | Group % correct | Standardisation % correct |
|-----------------|---------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------|------------|-----------------|---------------------------|
| MM1             | Number              | Fluency in facts and procedures     | What is six doubled?                                                                                       | 1 / 1      | 73              | 87                        |
| MM2             | Number              | Fluency in facts and procedures     | Multiply three by seven.                                                                                   | 1 / 1      | 50              | 63                        |
| MM3             | Number              | Fluency in conceptual understanding | Write in figures the number four thousand and thirty-six.                                                  | 0 / 1      | 31              | 63                        |
| MM4             | Number              | Mathematical reasoning              | A packet of forty-five sweets is shared equally between five people. How many sweets does each person get? | 0 / 1      | 23              | 64                        |
| MM5             | Number              | Fluency in facts and procedures     | A cake is cut into thirds. How many pieces are there?                                                      | 1 / 1      | 73              | 56                        |
| MM6             | Measures            | Fluency in conceptual understanding | My watch says half past two in the afternoon. What would a twenty four hour digital watch say?             | 0 / 1      | 0               | 28                        |
| MM7             | Number              | Mathematical reasoning              | One car has four tyres. How many tyres do three cars have?                                                 | 1 / 1      | 58              | 80                        |
| MM8             | Number              | Mathematical reasoning              | There are six eggs in one box. How many eggs are there in seven boxes?                                     | 0 / 1      | 19              | 52                        |
| MM9             | Number              | Fluency in conceptual understanding | What is twenty-five take away thirteen?                                                                    | 1 / 1      | 50              | 66                        |
| MM10            | Number              | Fluency in facts and procedures     | Write a multiple of six that is between fifteen and twenty-five.                                           | 0 / 1      | 12              | 44                        |
| MM11            | Number              | Fluency in conceptual understanding | Look at these numbers. Write down all the odd numbers.                                                     | 0 / 1      | 46              | 64                        |
| MM12            | Number              | Fluency in facts and procedures     | Add these numbers: forty-one, twenty-five and fourteen.                                                    | 1 / 1      | 27              | 43                        |
| MM13            | Number              | Mathematical reasoning              | There are thirty-two people in a restaurant. Thirteen are adults. How many are children?                   | 0 / 1      | 23              | 36                        |
| MM14            | Measures            | Mathematical reasoning              | I have twenty-seven pence. I want to spend thirty-five pence. How much more money do I need?               | 1 / 1      | 62              | 61                        |
| MM15            | Measures            | Fluency in facts and procedures     | How many days are there in eight weeks?                                                                    | 0 / 1      | 15              | 47                        |
| AU1             | Number              | Fluency in conceptual understanding | Draw lines to connect the matching fractions.                                                              | 2 / 2      | 98              | 89                        |
| AU2             | Number              | Fluency in conceptual understanding | What fraction of this shape is shaded?                                                                     | 1 / 1      | 38              | 78                        |
| AU3a            | Number              | Fluency in conceptual understanding | Which day had the lowest midnight temperature?                                                             | 1 / 1      | 58              | 59                        |

| Question number | Curriculum category | Process category                    | Question content                                                                                                             | Score (/x) | Group % correct | Standardisation % correct |
|-----------------|---------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------|------------|-----------------|---------------------------|
| AU3b            | Number              | Fluency in conceptual understanding | Which day had a midnight temperature 1 degree higher than Friday?                                                            | 1 / 1      | 35              | 50                        |
| AU4             | Number              | Mathematical reasoning              | On Sunday the midnight temperature was -2 degrees. The next day, the midnight temperature was 5 degrees higher. What was it? | 1 / 1      | 42              | 49                        |
| AU5             | Geometry            | Fluency in facts and procedures     | Name the 3 shapes that are labelled.                                                                                         | 1 / 1      | 35              | 46                        |
| AU6a            | Geometry            | Fluency in facts and procedures     | In which labelled shape are all the angles right angles?                                                                     | 0 / 1      | 62              | 60                        |
| AU6b            | Geometry            | Fluency in facts and procedures     | In which labelled shape are all the angles greater than a right angle?                                                       | 0 / 1      | 42              | 42                        |
| AU7             | Number              | Mathematical reasoning              | Here are 3 more fraction sums that make 1 whole. Fill in the missing numbers.                                                | 2 / 2      | 29              | 62                        |
